ABOUT CHUANGBO

Rui'an Chuangbo Machinery Co.,Ltd.

瑞安市创博机械有限公司成立于1995年，位于瑞安市南滨街道工业区，是专业制造机械部件及机电产品的生产厂商，集产品研发、生产、销售于一体的高新技术企业。公司拥有自主进出口经营权，产品随畅销全国及出口多个国家和地区。公司厂区共有面积42000平方米，员工200余人，加工设备150余台，规模为目前国内细分行业领先地位。

Rui'an Chuangbo Machinery Co., Ltd. was established in 1995 and is located in the Nanbin Street Industrial Zone of Ruian City. It is a professional manufacturer of mechanical components and electromechanical products, and a high-tech enterprise that integrates product research and development, production, and sales. The company has independent import and export rights, and its products are sold nationwide and exported to multiple countries and regions. The company has a total area of 42000 square meters, more than 200 employees, and more than 150 processing equipment, with a scale that is currently leading in the domestic sub industry.

公司拥有国内同行业最先进的生产水平和科研检测设备，产品主要用于锂电池制造设备行业及印刷、包装、塑料、造纸、纺织、制药机械等行业。公司先后获得国家高新技术企业、省级专精特新企业、省级研发中心、省级科技型中小企业、绿色工厂、信用管理示范企业、全国印刷机械标准化技术委员会委员等荣誉称号。

The company has the most advanced production level and scientific research and testing equipment in the same industry in China. Its products are mainly used in the lithium battery manufacturing equipment industry, as well as in industries such as printing, packaging, plastics, papermaking, textiles, pharmaceutical machinery, etc. The company has successively won honorary titles such as National High tech Enterprise, Provincial Specialized and Innovative Enterprise, Provincial R&D Center, Provincial Science and Technology Small and Medium sized Enterprise, Green Factory, Credit Management Demonstration Enterprise, and Member of the National Printing Machinery Standardization Technical Committee.

铝导辊

ALUMINUM ROLLER

概述

铝导辊的铝导辊又称“铝合金导辊”，是通过选用优质的铝合金材料，经模压，成管型，内有加强筋结构，强度高。外径有Φ25mm-Φ400mm等多种规格。全轴经电脑动平衡校正处理，使平衡最高精度达到2g内，运用精密的设备及特殊刀具，正常辊面光泽度可以达到0.8，特殊情况也可做超镜面处理，同轴度达到0.02mm。轴端经特殊工艺处理，配合进口轴承，在高速运转下，皆能轻松自如。根据产业的不同需求，辊面还可做特殊处理：阳极氧化处理、阳极硬质氧化处理、着色氧化处理、微弧氧化处理，也可做碳化钨陶瓷复合涂层、氧化铝钛、氧化铝、氧化铬、氧化锆等涂层处理，等离子合金防粘涂层、喷砂涂层、软木贴包覆等表面处理使其具有良好的耐刮、耐磨、防粘性能。铝导辊具有强度高、阻力小、重量轻、转动灵活、不生锈、耐磨耐腐蚀性，特别适用于锂电池制造设备行业及印刷、包装、塑料、造纸、玻纤、制药、纺织等机械行业及各种卷材类产业。

CHARACTERISTIC

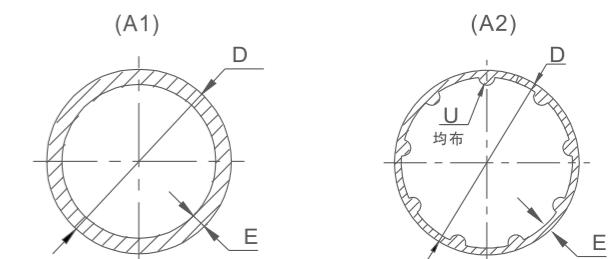

Aluminum guide roller (also known as "aluminum alloy guide roll") is made of high quality aluminum alloy materials, and it has all kinds of modules and sizes with ribs structure and the outside diameter is from 25mm to 400mm. Under the control by computer balancing correction process, the dynamic balance of the aluminum roller will be smaller than 2g. With the use of sophisticated equipment and special tools, the roll surface roughness can be 0.8, super mirror treatment can also be done under special circumstances, concentricity can reach to 0.02mm. Special treatment in the shaft axle of the roller, with imported bearings, the aluminum guide roller works well even at high speed. According to different industries, the surface of the roller can also do special treatment: Soft Anodizing treatment, Hard Anodize treatment, Colored Anodize treatment, Micro-Arc Oxidation treatment, Carbide Ceramic Composite Coating, Aluminum Oxide/Titanium Oxide, Aluminum Oxide, Chromic Oxide, Zirconium Oxide And Other Coating treatments, Plasma Alloy Anti-Sticking coating, Sandblasting coating, Cork coating and so on. The treatments can make the roller scratch, abrasion and anti-sticky. Aluminum guide roller has normally 3 standard types: Without-shaft type, Shaft type and Through-shaft type. The surface can be treated by normally 3 standard line types: Center line type, Cross line type and Grooved type. Chuangbo brand aluminum guide roller is high strength, low resistance, light weight, flexible rotation, no-rusty, wearable and corrosion resistance, especially suitable for Lithium battery manufacturing equipment industry and printing, packaging, plastics, paper, glass, pharmaceutical, textile machinery and industries.

气胀轴

AIR SHAFT

钢制键条式气胀轴
Steel-made
lug type shaft

铝制键条式气胀轴
Aluminum-made
lug type shaft

板条式气胀轴
Leaf type air shaft

通键式气胀轴
Multi bladder
type air shaft

概述

气胀轴是一种特制的收卷、放卷轴，是经过高压充气后表面（键条/板条）可以突起，放气后（键条/板条）迅速缩回的轴。气胀轴使用极为方便快捷，用户只需自备气源，空气压力控制在6-8kg/cm²范围内，需锁紧外部的部件（比如圆形相适应的纸管）时，只要充气枪对着气胀轴上的气嘴充气便可完成，键条/板条会突出顶住外部的部件。需放松纸管卸料时，用手按下充气嘴上的活动气芯即可放气，键条/板条会缩回原位，外部的部件即可取出。

气胀轴分为：键条式气胀轴（钢制、铝制）、板条式气胀轴（三片、四片、六片）。气胀轴的用途很广，凡有收卷、放卷、分切的机器，都可使用气胀轴，甚至包括轻金属行业，广泛应用于：印刷、包装、塑料、造纸、玻纤、制药、电子电池、纺织等机械行业及各种卷材类加工产业。

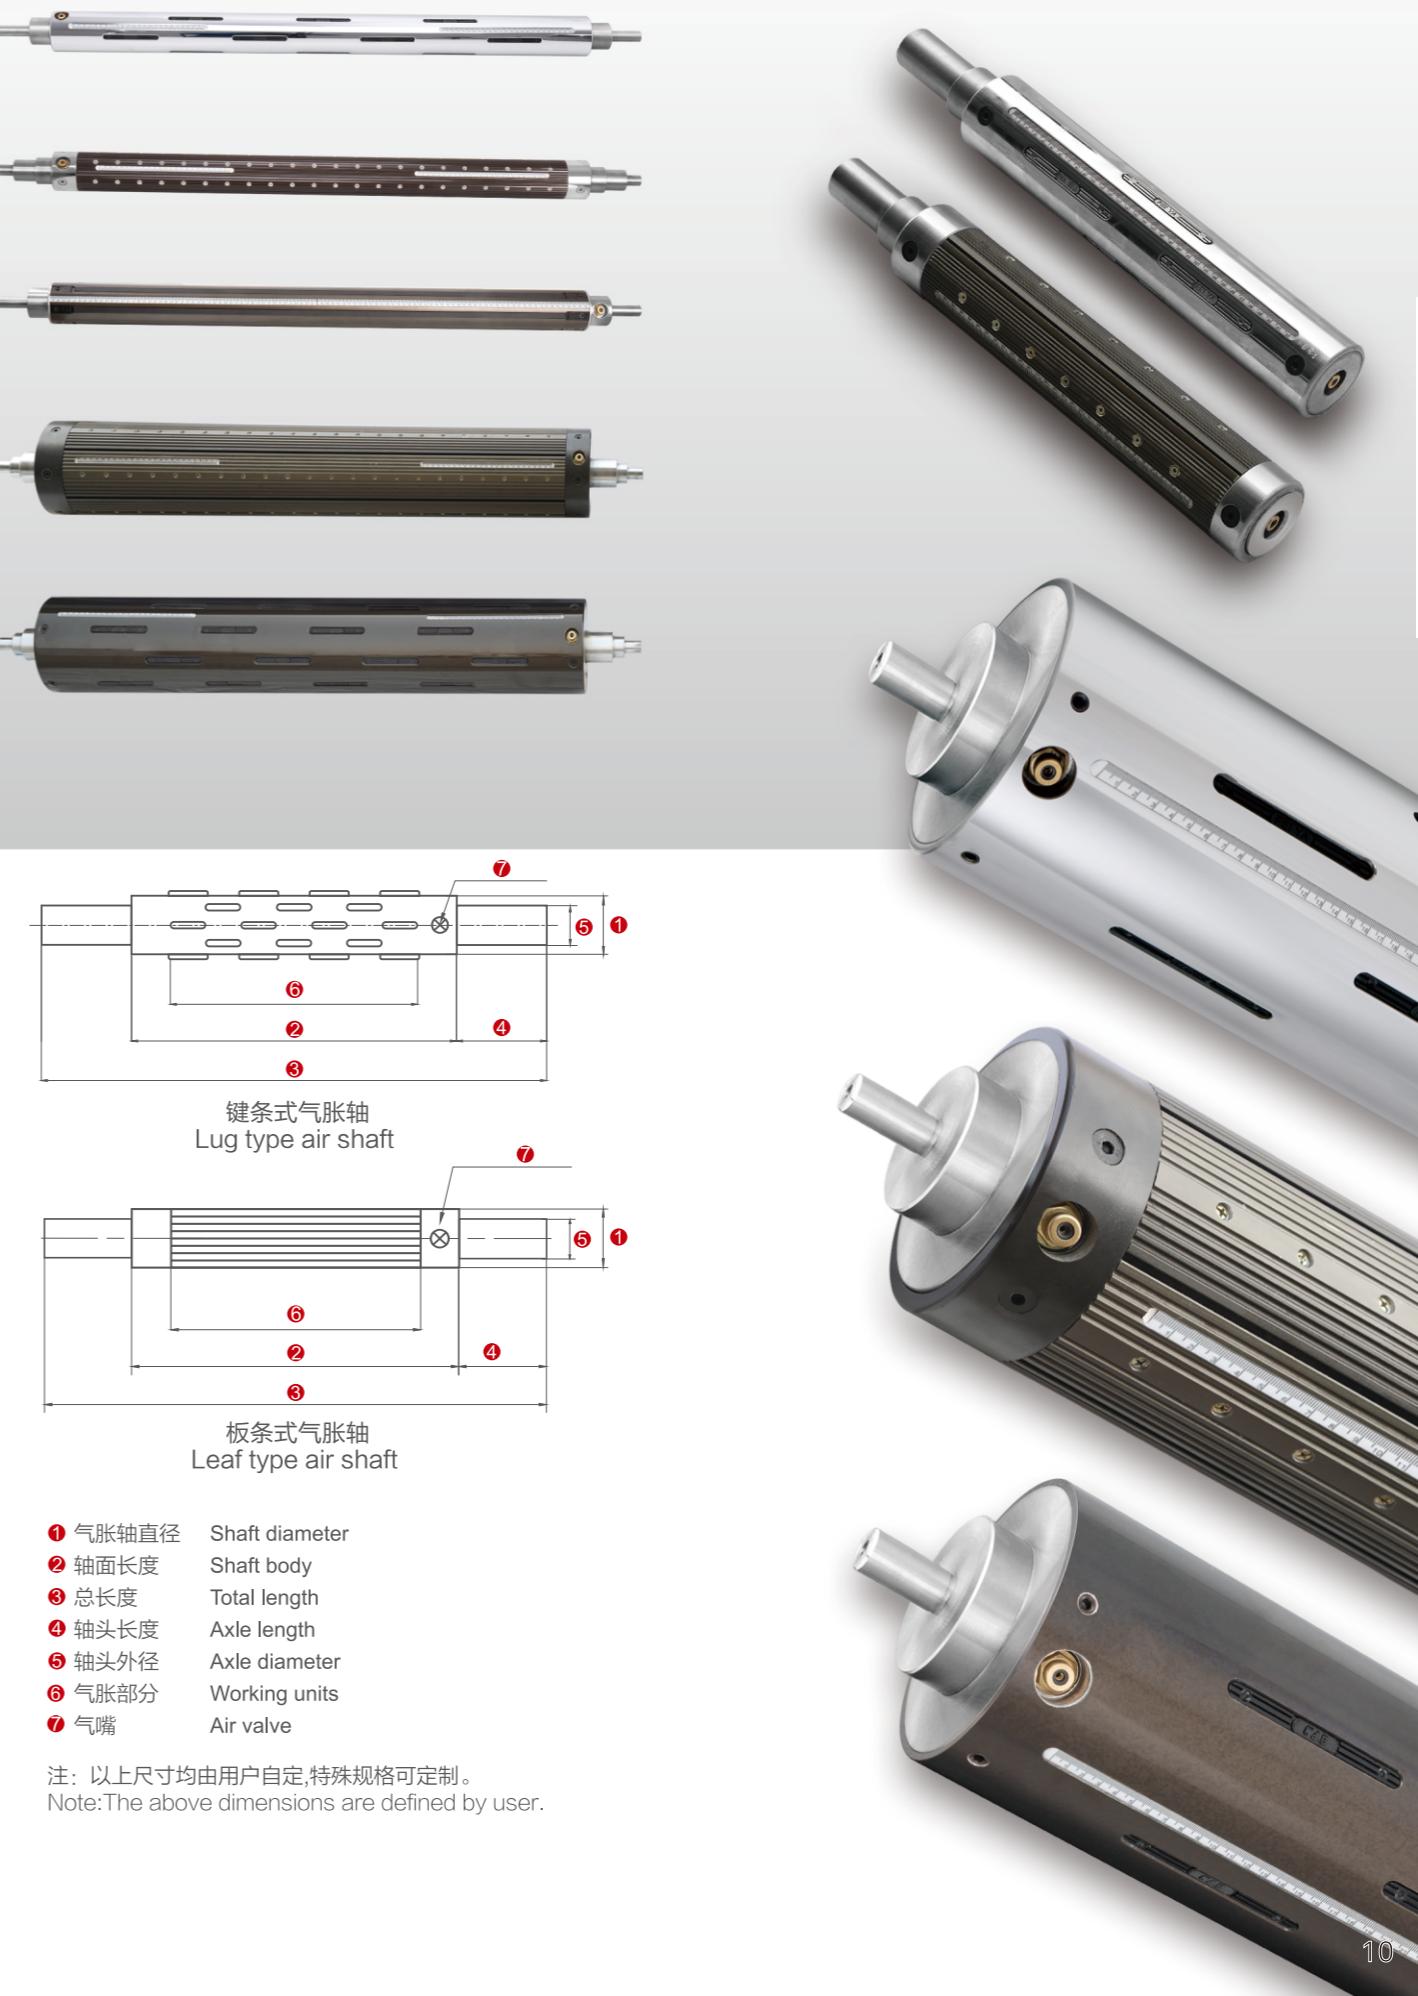

SUMMARY

Air shaft is a special shaft for rewind and unwind. The shaft surface will be expand when the high-pressure gas filled in the shaft. Air shaft is easy to operate, the user can only have the air supply with the air pressure controlled within 6-8kg/cm². Just aired the shaft through the air valve and when user want to lock the web, push the core activities of the air valve to deflate, the expand part will revert to its original appearance, then web can be removed easily.

Air shaft include lug type (steel-made or ally-made) and leaf type. Air shaft is widely used for winding, rewinding and slitting machines. It is widely used in printing, packaging, plastics, paper, glass, pharmaceuticals, electronic battery, textile machine and industry.

气胀鼓/气胀套 AIR DRUM AIR ADAPTER

概述

1. 气胀鼓外表面胀起部分材料为橡胶，已经定型生产，有现货；
2. 气胀套用途：装配在小规格气胀轴（如3英寸）外面，以达到大规格（如6英寸）的使用效果
3. 规格可以根据要求定制

① 气嘴
② 气胀部分
③ 夹盖调节(螺丝)
Air valve
Working unit
Clamp cover adjustor (screw)

滑差轴 DIFFERENTIAL SHAFT

概述

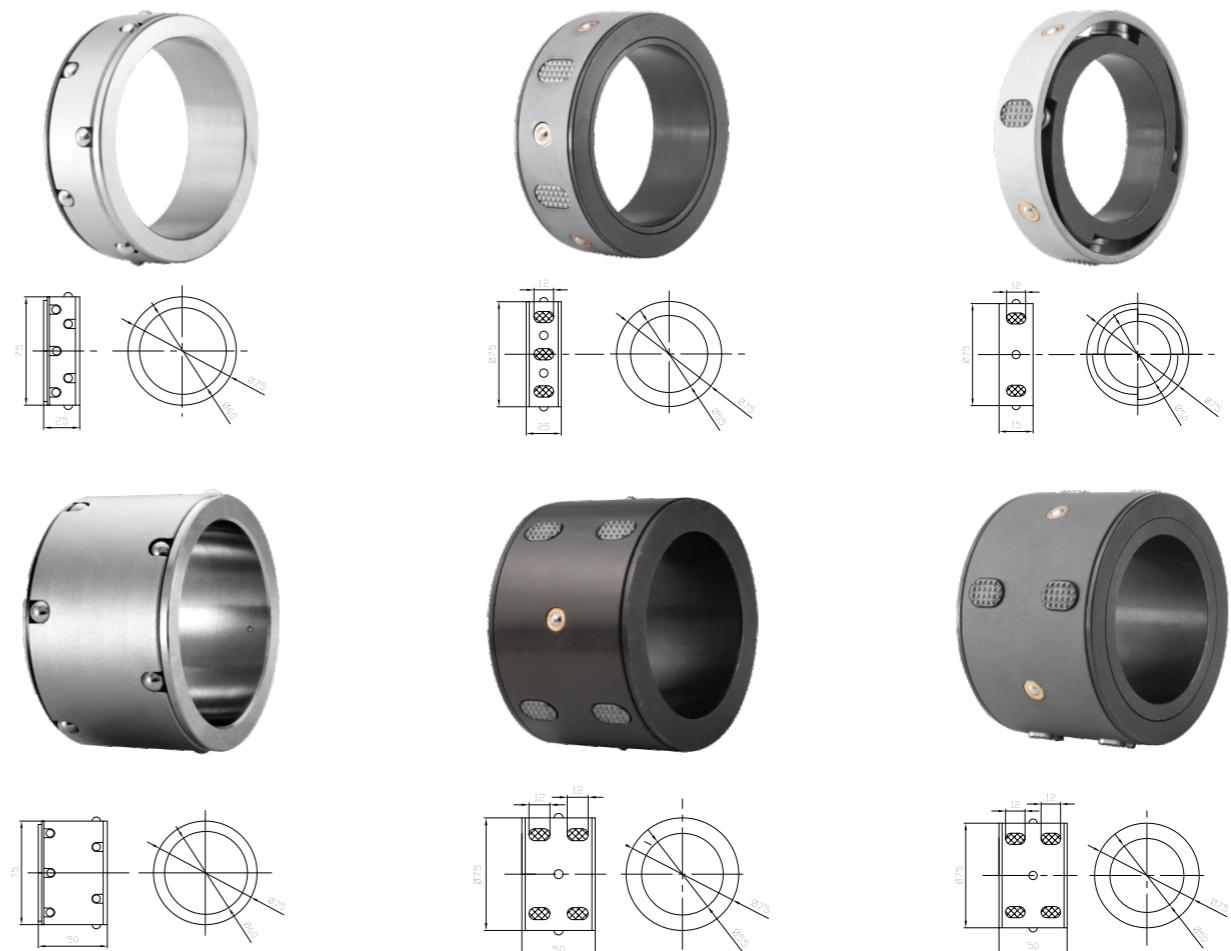

滑差轴又称差速轴、摩擦轴，用作分切机的收卷轴及特殊放卷轴。滑差轴由多个滑差环组成，利用滑差轴上各个滑差环打滑的原理，使轴上多个卷筒料，始终保持恒张力收放卷，保证物料张紧有度。滑差轴按原理分，可分为机械滑差轴及气动滑差轴；滑差轴按类型分，可分为键式滑差轴及珠式滑差轴。

机械胀套 MECHANICAL EXPAND CHUCK

3 " 机械胀套
3 " MECHANICAL EXPAND CHUCK

6 " 机械胀套
6 " MECHANICAL EXPAND CHUCK

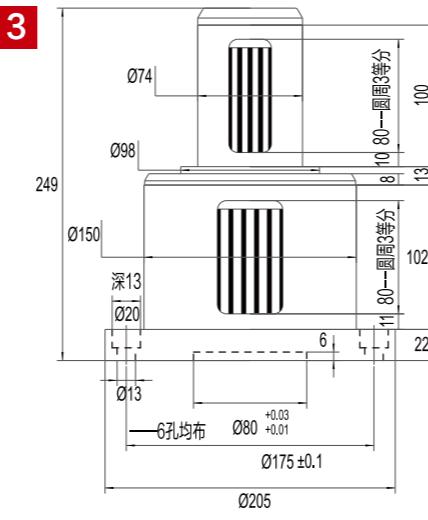

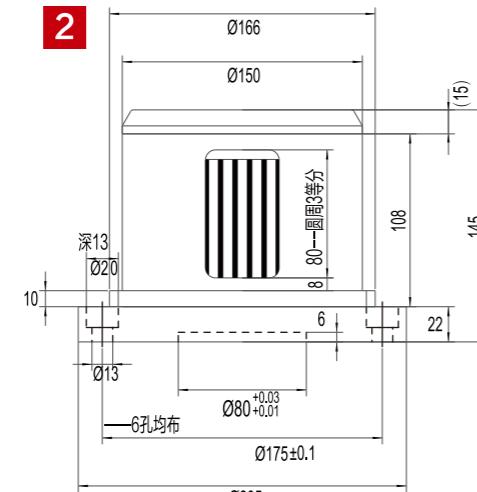

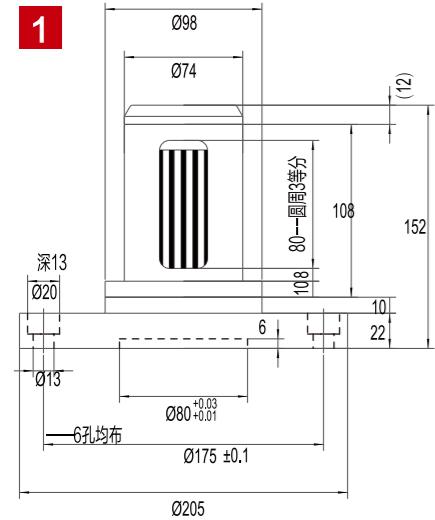

3 " /6 " 机械胀套
3 " /6 " MECHANICAL EXPAND CHUCK

概述

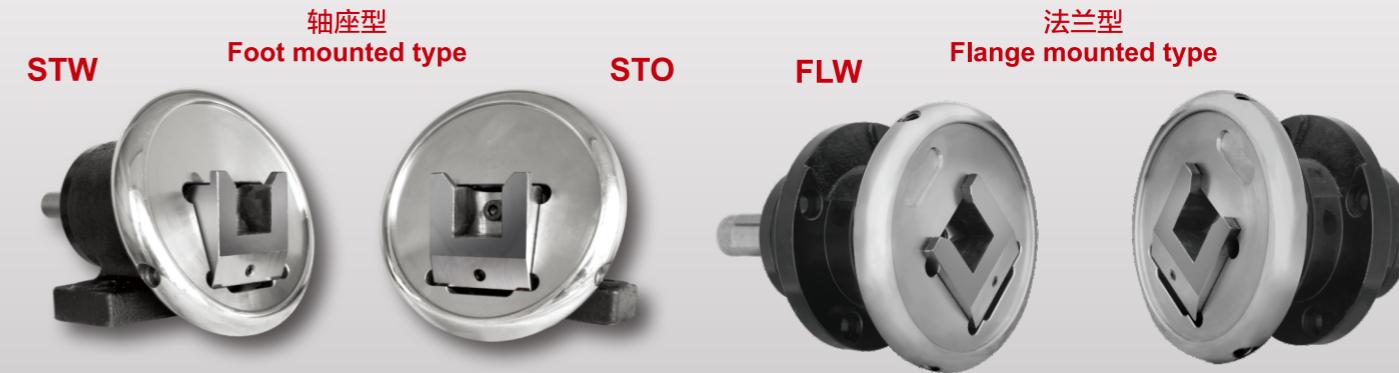

工作原理为机械动作，抓紧卷芯内径后同心度好，受力分布均匀，夹紧力大。只要旋转胀体约12度，即可夹紧或松开纸管。使用安全可靠，而且寿命特长，最适合因重量大引起气胀轴易损的机台上使用。

SUMMARY

Mechanical expand chuck can lock the roll by mechanical action, which the web will have a good concentricity, the stress is distribution with clamping force. As long as the rotation bulging body 12 degrees, tighten or loosen the web will be easy. The chuck is safe, reliable, and long life, it is more suitable for the machine which the air shaft is easy to broken caused by the weight of the web.

安全夹头 SAFETY CHUCK

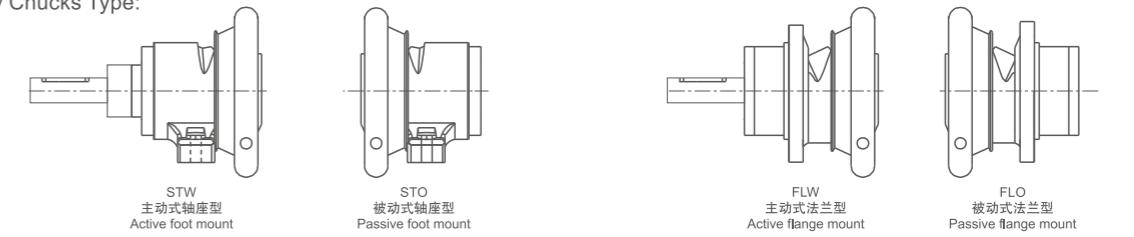

概述

安全夹头是为连续动作的卷轴(气胀轴)提供快速、准确、简易、安全又有效的连接装置、避免卷轴在运作过程中松动或旋紧，有效提高工作效率及产品品质。安全夹头按安装方式分为：轴座型与法兰型。广泛应用于：印刷、包装、塑料、造纸、玻纤、制药、电子电池、纺织等机械行业。

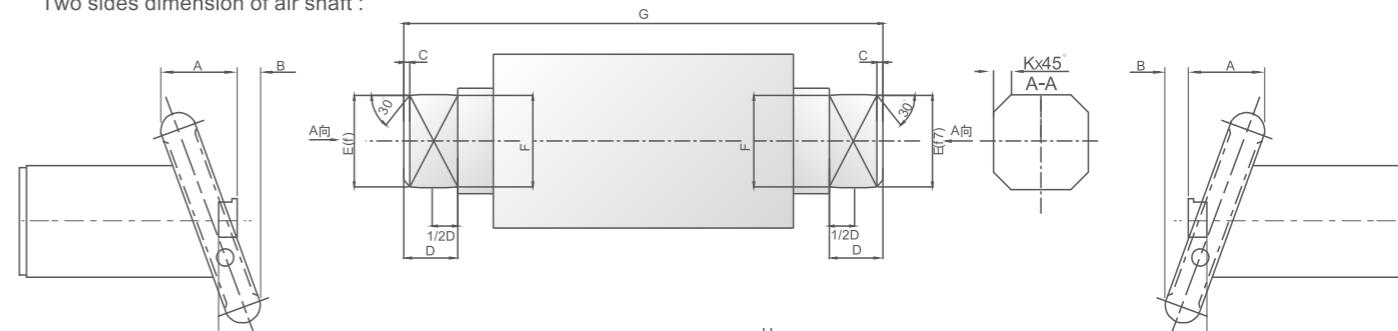

SUMMARY

Safety Chuck is for continuous action of the shaft (air shaft) to provide fast, accurate, simple, safe and effective connection device, to avoid shaft running loose or tighten, can improve work efficiency and guarantee the quality. Safety chuck could be flange-mounted or foot-mounted. It is widely used in printing, packaging, plastics, paper, glass, pharmaceutical, electronics batteries, textile machine and industrial.

弧形辊

BANANA ROLER

概述

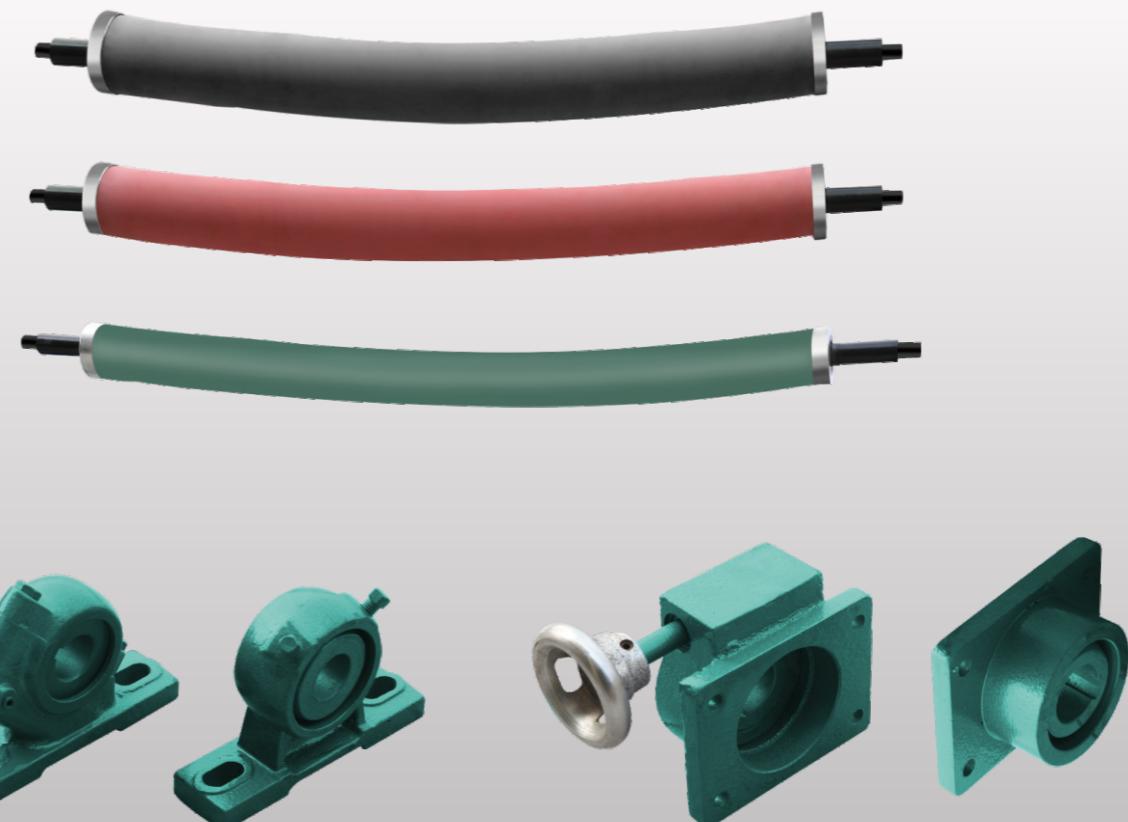

弧形辊是一个沿纵向方向看有一定弧度并且由球轴承固定可旋转的辊。由于弧形辊具有一定的弧度，当纸张/薄膜通过弧形辊转动时，在纵向方向上纸张/薄膜将被拉长，来达到舒展幅材的作用，消除幅材进行过程中的褶皱和防止材料分切过程中可能产生的交错。用于纸张、薄膜、纺织品及类似产品加工设备上。

CHARACTERISTIC

Banana roller (curved rubber roller) has a certain arc in the longitudinal direction, it is fixed by the ball bearing and rotatable. When the paper / film is rotated through the roller, it will be stretched in the longitudinal direction because of the certain curvature of the curved rubber roller. The roller can stretch the paper / film to eliminate wrinkles and prevent the material in the cutting process. It is widely used for the paper, film, textiles and similar machine and equipment.

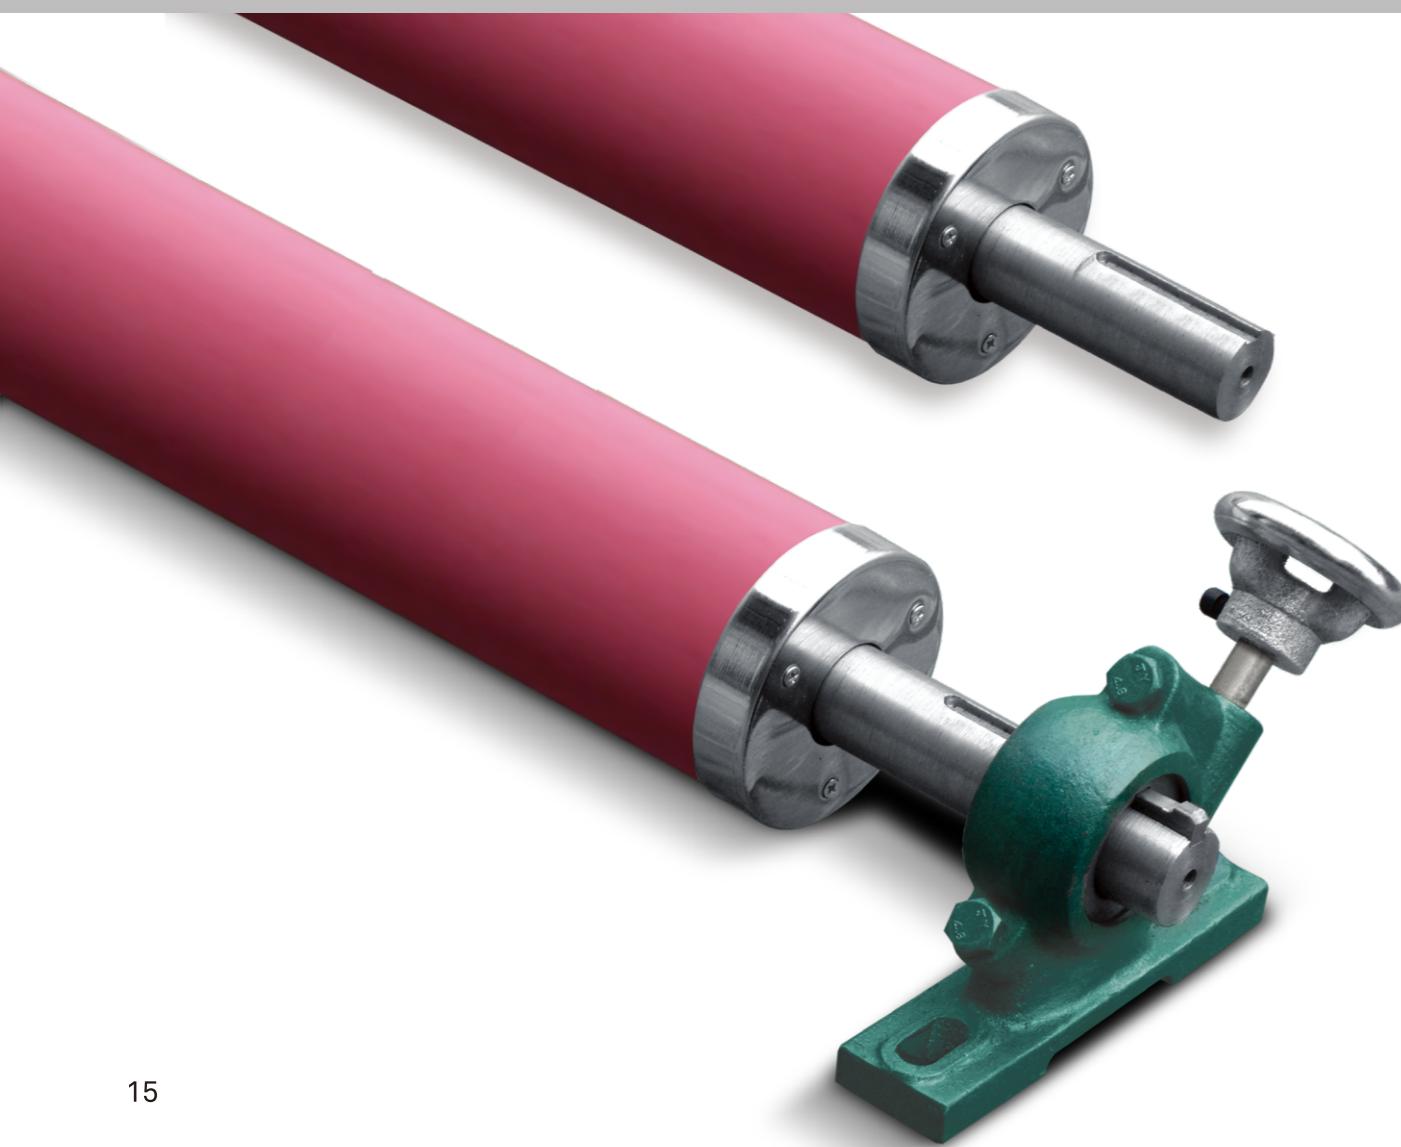

特点

1. 材质主要采用丁青橡胶、三元乙丙等耐磨材质。颜色可选红色、绿色、黑色等
2. 内部结构为轴承环套
3. 胶管内部装置轴承，回转扭矩小
4. 橡胶表面平滑，对基材无不良影响
5. 直径：Φ60、Φ80、Φ100、Φ125、Φ150、Φ160、Φ180、Φ200

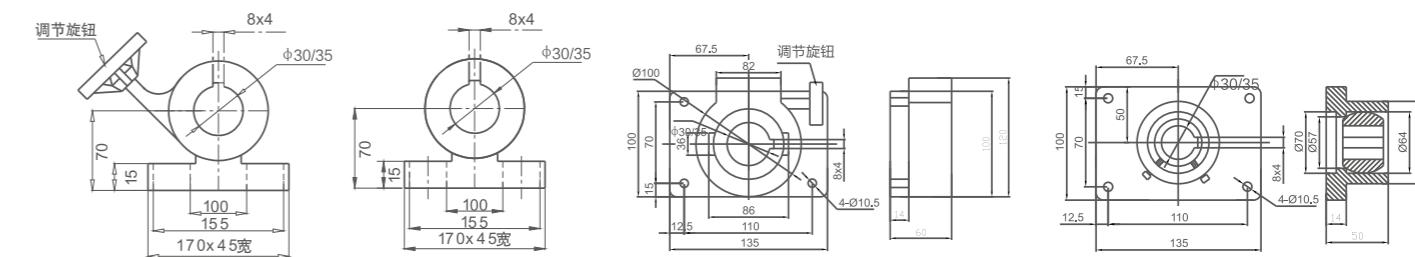

CHARACTERISTIC

1. The rubber material is normally nitrile rubber, optional for red, green and black color.
2. Bearing for internal structure.
3. Bearing installed in the rubber sleeve, resulting in small swing torque.
4. Smooth rubber surface has not any negative impact in the material.
5. Diameter include: Φ60、Φ80、Φ100、Φ125、Φ150、Φ160、Φ180、Φ200.

离心风机 CENTRIFUGAL FAN

概述

DF系列离心风机具有风量大、风压高、噪音低等优点。采用“多叶、前向、窄轮”式叶轮，具有流通面积大、加速型流道，在对流体强力加压的同时产生的涡流小等系列特点。广泛应用于：印刷、包装、塑料、造纸、玻纤、制药、制鞋等机械行业。也可用于饮食、温控、排尘、冷却、吹风和通气等各种场合。离心风机可制成左旋和右旋两种形式；从叶轮一侧正视，叶轮顺时针旋转称为左旋转，叶轮逆时针旋转称为右旋转。

SUMMARY

DF series centrifugal fan can feature in rich wind, high pressure and low noise by the "multiple, forward, narrow" impellers. Widely used in printing, packaging, plastics, paper, glass, pharmaceuticals, footwear and other machiner and industrial. It can also be used for temperature, dust emission, cooling and so on.

原理

离心风机主要由叶轮、进风口、蜗壳及三相异步电机等组成。叶轮转动时，叶道（叶片构成的流道）内的空气，受离心力作用而向外运动，在叶轮中央产生真空间度，因而从进风口轴向吸入空气。吸入的空气在叶轮入口处折转90°后，进入叶道，在叶片作用下获得动能和压能。从叶道甩出的气流进入蜗壳，经集中、导流后，从出风口排出。离心风机是依靠输入的机械能，提高气体压力并排送气体的机械，它是一种从动的流体机械。

PRINCIPLE

Centrifugal fan consists of impeller, air inlet, fan shell and other components. When impeller rotates, the air will leave the channel, and will have outward movement by the centrifugal force, so the center of the impeller can generate the degree of vacuum, and intake air. Then intake air will be folded 90° at the entrance of impeller, get kinetic and pressure energy under the blades effect. Air flow from blade channel flows into spiral volute, exhausts from air outlet after concentration and diversion.

概述

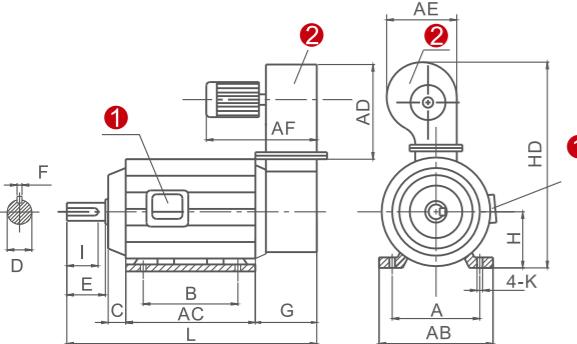

力矩电机，是一种具有软机械特性和宽调速范围的特种电机，具有低转速、大扭矩、过载能力强、响应快、特性线性度好、力矩波动小等特点。力矩电动机的轴不是以恒功率输出动力而是以恒力矩输出动力。适用于卷绕、开卷、堵转和调速等场合及其他用途，被广泛应用于纺织、电线电缆、金属加工、造纸、橡胶、塑料以及印刷机械等工业领域。

SUMMARY

Electric torque motor is a kind of special motor with soft mechanical properties and wide speed range. It has the advantages of low speed, high torque, strong overload capacity, fast response, good linearity characteristics, small torque fluctuation and so on. The output of the torque motor axle is not constant power, but constant torque. This kind of motor is suitable for winding, unwinding, stall, and speed regulating, are widely used in textiles, electric wire, metal-processing, paper, rubber, plastics and printing machine and industrial.

原理

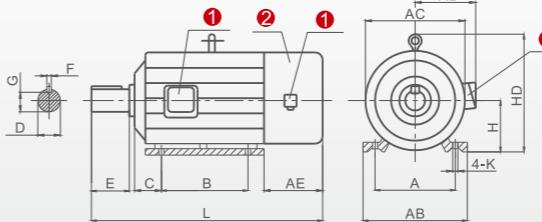

当负载增加时，电动机的转速能自动的随之降低，而输出力矩增加，保持与负载平衡。力矩电机的堵转转矩高，堵转电流小，能承受一定时间的堵转运行。由于转子电阻高，损耗大，所产生的热量也大，特别在低速运行和堵转时更为严重，因此，电机在后端盖上装有独立的轴流式或离心式风机（输出力矩较小100机座号及以下除外），作强迫通风冷却，力矩电机配以可控硅控制装置，可进行调压调速，调速范围可达1:4，转速变化率≤10%。

PRINCIPLE

When the load increases, the motor speed can be automatically decreased and the output torque increases to maintain the load balancing. The locked-rotor torque of this kind of motor is high and the locked-rotor current is small, so it can bear stalling. Due to the high rotor resistance, the heat generated is large, especially more serious when runs at low speed or even stall, so that the motor end cap fitted with a separate axial fan or centrifugal fan for forced air cooling (except the one output torque is small). Torque motor with SCR control device, can be voltage and speed control, speed regulating range up to 1:4, the rate of the speed change ≤ 10%.

磁粉制动器/磁粉离合器

Magnetic Powder Brake / Magnetic Powder Clutch

孔式制动器
CELLULAR TYPE MAGNETIC
POWDER BRAKE

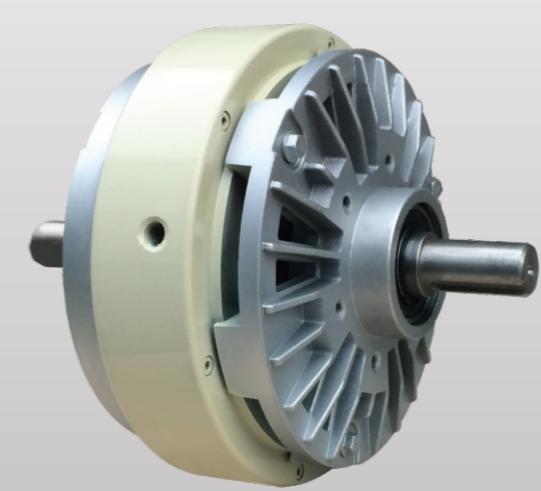

单轴制动器
SINGLE-SHAFT MAGNETIC
POWDER BRAKE

概述

磁粉制动器、离合器是根据电磁原理和利用磁粉传递转矩的，具有激磁电流和传递转矩成线性关系的特点。在同滑差无关的情况下能够传递一定的转矩，具有响应速度快、结构简单、无污染、无噪音、无冲击振动、节约能源等优点，是一种多用途、性能优越的自动控制元件。磁粉制动器经常被用于传动机械的测功加载和制动等。磁粉离合器还可用缓冲起动、过载保护、调速等。现已被广泛应用于造纸、印刷、包装、塑料、橡胶、玻纤、纺织、印染、电线电缆、冶金等以及其他有关卷取加工行业中的放卷和收卷张力控制。磁粉制动器和磁粉离合器经常配对使用。

SUMMARY

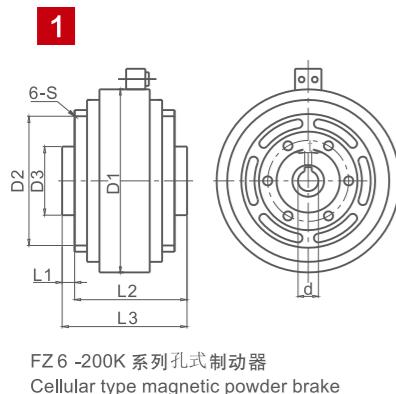

Magnetic powder brake / clutch can transmit torque based on electromagnetic theory and the use of magnetic powder. It has the characteristics which magnetizing current and transmit torque has a linear relationship. It has advantages of fast response, simple structure, no pollution, no noise, no shock and vibration, energy-saving and so on. It is a versatile, superior performance of automatic control components. Magnetic powder brake is used to drive machinery, such as loading and brake dynamometer. Magnetic powder clutch can also be used to buffer starting, overload protection, speed control and so on. It is widely used in unwinding and rewinding tension control in papermaking, printing, packaging, plastics, rubber, glass, textile, printing and dyeing, wire and cable, metallurgical and other machine and industrial.

自动张力控制器 AUTOMATIC TENSION CONTROLLER

概述

在很多工业生产如纸张、纺织品、塑料薄膜、电线、印刷品、磁带、金属带线材等的生产过程中，材料的收卷、放卷张力对产品的质量至关重要，为此要求进行恒张力控制，即在卷绕的过程中使产品承受最佳张力，且自始至终保持不变。若张力过大，会造成加工材料的拉伸变形；张力过小，会使卷取的材料的层与层之间的应力变形，造成收卷不整齐，影响加工质量。自动张力控制器是一种实现恒张力控制的自动控制系统，其作用主要是实现辊间的同步，收卷和放卷的均匀控制。一套典型的张力控制系统主要由自动张力控制器，压力传感器，磁粉制动器或磁粉离合器构成。通过压力传感器测定卷材的张力，然后由磁粉控制器自动调整制动器或磁粉离合器来控制卷料张力，适用于高精度、高速度的张力控制场合，具有控制精度高、实时性能好等优点。

SUMMARY

In many industrial such as paper, textiles, plastic film, wire, printed matter, magnetic tape, metal strip wire, etc., the rewinding and unwinding tension of the material is critical to the quality of the product. Constant tension control is required for this purpose. That is, the product is subjected to optimum tension during the winding process and remains unchanged throughout. If the tension is too large, it will cause tensile deformation of the material; if the tension is too small, the stress between the layers will make the material deformed, resulting in irregular rewinding and affecting the quality. The automatic tension controller is an automatic control system that realizes constant tension control. Its function is mainly to achieve synchronization between the rollers and continuously uniform control of rewinding and unwinding. Automatic tension control system consists primarily of an automatic tension controller, pressure sensor, magnetic powder brake or clutch. The pressure sensor measures the tension of the roll and then the controller automatically adjusts the magnetic powder brake or clutch to control the tension of the roll. It is suitable for high-precision and high-speed tension control applications, and has the advantages of high control precision and good real-time performance.

适用范围

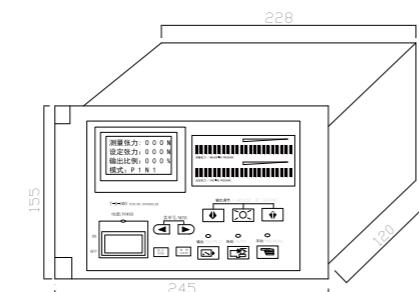

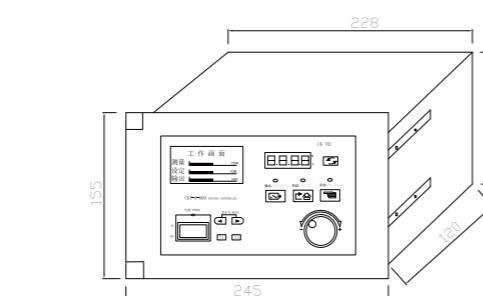

1. 工作电压: 输入AC180~245V, 50/60Hz
2. KDT-A(B)-600 表示最大使用张力600牛顿
KDT-A(B)-1000 表示最大使用张力1000牛顿
3. A型为液晶显示, 可进行MODBUS多机通讯 (RS485)
B型为数码显示, 不可进行MODBUS多机通讯
4. A型为旋钮调节, B型为按钮调节

KDT-A-600 KDT-A-1000

KDT-B-600 KDT-B-1000

手动张力控制器 MANUAL TENSION CONTROLLER

概述

在工业生产的诸多行业，经常会遇到卷绕控制问题，带料或线材的开卷、放卷张力对产品的质量至关重要。手动张力控制器能够改变电压，将AC220V变为并稳定供给DC24V，通过输出电流的调节，匹配磁粉制动器或者磁粉离合器满足材料的收放卷张力需求。

放料过程:

力矩电机输出转矩，连接磁粉制动器，磁粉制动器将力矩连接放料轴，进行放料。力矩电机由力矩控制器调节转速，磁粉制动器由张力控制器调节张力，使放料均匀，速度合适。

收料过程:

力矩电机输出转矩，连接磁粉离合器，磁粉离合器将力矩连接收料轴，进行收料。力矩电机由力矩控制器调节转速，磁粉离合器由张力控制器调节张力，使收料均匀，速度合适，料筒卷紧。

SUMMARY

Application

In many industries, winding control problems are often encountered, and the tension of the material is critical to the quality of the product. Manual tension controller can change the AC220V to a stable supply of DC24V, and adjust the output current to match the magnetic powder brake or the magnetic powder clutch to meet the material's rewinding and unwinding tension demands.

Feeding process:

Torque motor output torque, connected to magnetic powder brake, then the brake connects with the feeding shaft to feed the material. Electric torque-motor controller control the torque motor, tension controller control the magnetic powder clutch, resulting in uniform material feed and proper speed.

Rewinding process:

Torque motor output torque, connected to magnetic powder clutch, then the brake connects with the rewinding shaft to collect the material. Electric torque-motor controller control the torque motor, tension controller control the magnetic powder clutch, resulting in uniform material rewind, proper speed and roll tight.

APPLICATION

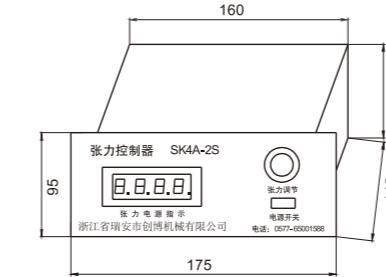

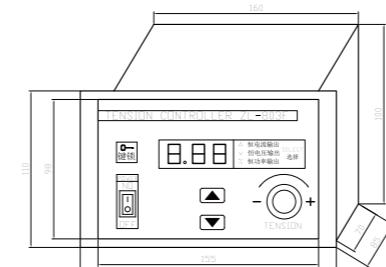

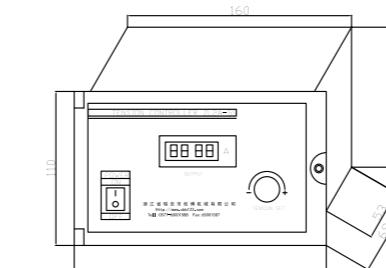

1. Environment temperature: -25°C ~ +55°C
2. Relative humidity: ≤85% (20°C ±5°C)
3. Stall places without significant shock and vibration
4. Voltage: input AC 220v, output DC 24v.
